Risk and reward profile

- This indicator shows how much a fund has risen and fallen in the past, and therefore how much a fund's returns have varied. It is a measure of a fund's volatility. The higher a fund's past volatility the higher the number on the scale and the greater the risk that investors in that fund may have made losses as well as gains. The lowest number on the scale does not mean that a fund is risk free.
- The Fund has been classed as 5 because its volatility has been measured as above average.
- This indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund.
- The risk and reward profile shown is not guaranteed to remain unchanged and may shift over time.
- Portfolio Currency Risk: As the Fund invests in overseas securities, movements in exchange rates may cause the value of your investment to increase or decrease.
- For full details of the Fund's risks please see the "RISK FACTOR" section of the prospectus and supplement available from the address in 'Practical Information' overleaf.
