Risk and reward profile

- As the Fund launched on 1 March 2021, the indicator has been calculated based in part on the volatility of the Investment Association Commodities and Natural Resources Sector (GBP) average over the last five years (in total return and GBP terms).
- The Fund is in the above risk category because it invests in shares.
- The lowest category does not mean a fund is a risk free investment.
- The value of investments may go down as well as up in response to general market conditions and the performance of the assets held. Investors may not get back the money which they invested.
- There is no guarantee that the Fund will meet its stated objectives.
- The movements of exchange rates may lead to further changes in the value of investments and the income from them.
- There is a risk that any company providing services such as safe keeping of assets or acting as counterparty to derivatives may become insolvent, which may cause losses to the Fund.
