About fund performance

Investors should always consider performance in relation to the objective of the fund and over periods of at least five years. If a fund has risen in value, it doesn't mean it is meeting its objective – especially if the fund is aiming to outperform a particular benchmark or meet a risk target. The same applies if the fund has fallen in value.

Our risk rating

Above-average risk

Above average risk funds typically invest in one single investment type or geographical region, for example regional equities (shares) or global bonds. This means that investors are completely exposed to the performance of that single investment type or region. These funds could experience lengthy periods where their value goes down depending on market conditions. However, these funds can also rise in value quite significantly and have historically provided good long-term growth. Because of their narrow investment focus, they're better suited to investors with at least five years to invest and to use in combination with other funds as part of a diversified portfolio.

Fund objective

This portfolio aims to provide long-term capital growth while keeping risk in a target volatility range of 15.5-20.5% over a market cycle, which can last three years or more. The portfolio is built using our Select Sector Portfolios. Each of the Select Sector Portfolios is made up of what the fund manager believes to be the best blend of available funds in their respective sectors. The fund invests almost exclusively in riskier assets, such as equities (shares of companies), including developed and emerging markets equities. To be consistent with the target volatility range, the fund would typically be expected to invest between 85-100% in equities. It's the highest risk of our Select Risk Profile Portfolios, but has the potential for higher long-term returns. The underlying assumptions that support the volatility and equity ranges are at the fund manager's discretion and are subject to change.

Fund performance

The following graph and tables show the performance of the fund over various time periods compared to the fund's benchmark (if there is one). All performance information is as at 31 Dec 2023 unless otherwise stated.

In the graph, performance is shown since launch if the fund is less than five years old.

■ Adventurous Select Portfolio (ARC)

	1yr	3yrs	5yrs	10yrs	
Fund	11.1%	6.3%	8.4%	7.6%	
	Dec 22 to Dec 23	Dec 21 to Dec 22	Dec 20 to Dec 21	Dec 19 to Dec 20	Dec 18 to Dec 19
Fund	11.1%	-6.4%	15.5%	2.2%	21.7%

Source: FE fundinfo. The performance information has been calculated in pounds on a bid-to-bid basis and is net of charges with gross income reinvested. Performance for periods over a year is annualised (% per year). Past performance is not a reliable guide to future performance. The value of an investment can fall as well as rise and is not guaranteed. Investors could get back less than they invested.

Fund manager information

This fund is an Aegon Solution. This means it is a pre-built fund Aegon have created to offer whole investment strategies in a single fund with the aim of making investing easier. We reserve the right to add, remove and replace the underlying funds within this solution with the aim of making sure the fund continues to meet its aims and objectives. Sometimes we work with external fund managers and they select and manage the underlying funds on our behalf. The additional charges/expenses may change when underlying funds are replaced, added or removed from the portfolio or when weightings between the underlying funds are changed. Please note, there's no guarantee the fund will meet its objective.

Risks specific to this fund

There is no guarantee the fund will meet its objective. The value of an investment can fall as well as rise and investors could get back less than they originally invested. All funds carry a level of risk and the information below outlines the key risks for this fund.

Currency risk - this fund invests overseas so its value will go up and down in line with changes in currency exchange rates. This could be good for the fund or bad, particularly if exchange rates are volatile.

Third party risk - in the event that the underlying investments which the fund invests in suspend trading, Aegon may defer trading and/or payment to investors. The value ultimately payable will depend on the amount Aegon receives or expects to receive from the underlying investments.

Target risk - the fund may sit outside its risk target at times, for example if risk in the markets is unusually high or low. The risk target is long term, so the manager wouldn't increase or decrease the fund's risk just to meet its risk target in the short term.
