About fund performance

Investors should always consider performance in relation to the objective of the fund and over periods of at least five years. If a fund has risen in value, it doesn't mean it is meeting its objective – especially if the fund is aiming to outperform a particular benchmark or meet a risk target. The same applies if the fund has fallen in value.

Our risk rating

Above-average risk

Above average risk funds typically invest in one single investment type or geographical region, for example regional equities (shares) or global bonds. This means that investors are completely exposed to the performance of that single investment type or region. These funds could experience lengthy periods where their value goes down depending on market conditions. However, these funds can also rise in value quite significantly and have historically provided good long-term growth. Because of their narrow investment focus, they're better suited to investors with at least five years to invest and to use in combination with other funds as part of a diversified portfolio.

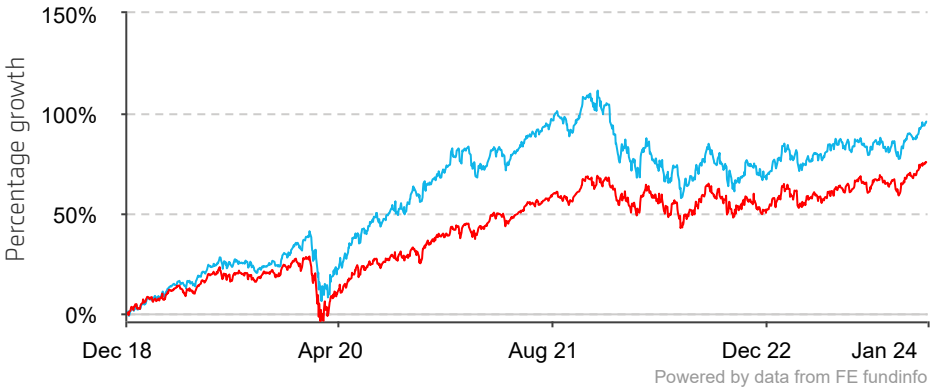

Fund objective

This fund aims to outperform the MSCI AC World ex UK index, net of fees, by investing in a concentrated portfolio of equities (company shares) from around the world.

Fund manager information

Aegon have created this fund to offer a single asset class solution in a single fund with the aim of making investing easier. We reserve the right to add, remove and replace the underlying funds within this solution with the aim of making sure the fund continues to meet its aims and objectives. Sometimes we work with external fund managers and they select and manage the underlying funds on our behalf. The additional charges/expenses may change when underlying funds are replaced, added or removed from the portfolio or when weightings between the underlying funds are changed. Please note, there's no guarantee the fund will meet its objective.

Risks specific to this fund

There is no guarantee the fund will meet its objective. The value of an investment can fall as well as rise and investors could get back less than they originally invested. All funds carry a level of risk and the information below outlines the key risks for this fund.

Currency risk - this fund invests overseas so its value will go up and down in line with changes in currency exchange rates. This could be good for the fund or bad, particularly if exchange rates are volatile.

Third party risk - in the event that the underlying investments which the fund invests in suspend trading, Aegon may defer trading and/or payment to investors. The value ultimately payable will depend on the amount Aegon receives or expects to receive from the underlying investments.

Country/region risk - this fund invests in a region that's particularly risky due to the lack of company regulation, political instability or war, for example. This means that its value will fluctuate more than funds invested in more developed countries or regions.

Derivative risk - this fund will use derivatives in a number of ways to achieve its objectives. Holdings may add up to over 100% because derivatives offer a way to gain exposure to the returns of a specified equity or bond market without having to directly own it. These negative figures are not shown within the top holdings section. Derivatives allow a manager to buy or sell an investment at a specified future date for a specified price. However, this means the fund could be exposed to additional risks if the market moves up when the manager expected it to go down or vice versa.
