**The data refers to past performance. Past performance does not predict future returns.**

Performance: monthly Fund returns are based on the percentage change in the net asset value per share, after adjusting those values to include any reinvestment of dividends, interest and capital gain distributions. Monthly returns are linked geometrically to determine quarterly and annual returns. Gross returns are calculated by adjusting the monthly net return to exclude Administration, Trust and Custody fees. Fees would reduce the returns shown.

Standardised Performance: Performance figures are shown on a mid-to-mid basis, inclusive of any net reinvested income and net of the annual management charge and all other fund expenses.

† Distribution Yield is calculated by dividing the distributions paid (yearly, monthly, etc.) by its cost or net asset value. Distribution yield can be used as a measure of investment cash flow provided by an investment relative to the cost paid for that investment.

SEI's strategic allocations are based on our long-term market expectations and are derived from our capital market assumptions (which are reconsidered every 3 years). In the short-term, we may over or underweight these views as part of our tactical allocation to try to take advantage of short-term opportunities.

Principal Risk

- A decline in the credit quality, or perceived credit quality, of an issuer could cause the value of investments held by the Fund to decline. Also, the issuer of an investment held by the Fund may not meet its payment obligations.
- Increases in interest rates are likely to cause the value of bonds or similar assets held by the Fund to decline in value.
- For further details of the risks, please refer to the Fund's prospectus.
