Expenses can include costs paid by Aegon to third parties. The fund charges may differ for Retiree (RR) or Aegon One Retirement (AOR).

## About fund performance

Investors should always consider performance in relation to the objective of the fund and over periods of at least five years. If a fund has risen in value, it doesn't mean it is meeting its objective – especially if the fund is aiming to outperform a particular benchmark or meet a risk target. The same applies if the fund has fallen in value.

## Our risk rating

**Below-average risk**

Below average risk funds will generally see some change in day-to-day value, both up and down, and these changes will typically be larger than those of a cash deposit. They may hold a broad range of investment types, including equities (shares), but a significant proportion may also be invested in investments that aim to provide a reliable source of income (like government and corporate bonds) and, with that, greater stability than would typically be available from equities. They try to provide better long-term growth prospects than a cash deposit, but are lower risk than funds investing largely in equities.

## Fund objective

This fund is for investors in the Scottish Equitable Sequel Growth Journey fund at the end of the risk reduction stage who have passed their Nominated Retirement Date (NRD). We'll automatically switch investors into this fund on the 1 January after they reach their NRD. The fund is designed to offer some growth potential and the mix of investments reflects the fact that you remain comfortable retaining an element of risk by investing in diversified mix of equities, bonds and cash. If you don't move your investment on your NRD, you'll remain in this fund until you tell us what you want to do with your pension. Sequel Investments Limited (SIL) is a professional investment advisory firm, owned by Foster Denovo Group. SIL provides the asset allocation model and oversight for all the Sequel funds, for which they receive a fee, paid from the funds' annual management charge. The fee depends in part on how much money is in these funds.

## Fund performance

The following graph and tables show the performance of the fund over various time periods compared to the fund's benchmark (if there is one). All performance information is as at 31 Dec 2023 unless otherwise stated.

In the graph, performance is shown since launch if the fund is less than five years old.

Source: FE fundinfo. The performance information has been calculated in pounds on a bid-to-bid basis and is net of charges with gross income reinvested. Performance for periods over a year is annualised (% per year). Past performance is not a reliable guide to future performance. The value of an investment can fall as well as rise and is not guaranteed. Investors could get back less than they invested.

## Underlying fund

Fund mgmt group  
Aegon/Scottish Equitable plc

## Fund manager information

This fund is a fund of funds. This means it invests in a mix of different underlying funds, and in different investments, so you're not reliant on the success of just one fund manager or one type of investment. We reserve the right to add, remove and replace the underlying funds with the aim of making sure the fund continues to meet its aims and objectives. The additional charges/expenses may change when underlying funds are replaced, added or removed from the portfolio or when weightings between the underlying funds are changed. Please note, there's no guarantee the fund will meet its objective.

---

## Risks specific to this fund

There is no guarantee the fund will meet its objective. The value of an investment can fall as well as rise and investors could get back less than they originally invested. All funds carry a level of risk and the information below outlines the key risks for this fund.

---

**Currency risk** - this fund invests overseas so its value will go up and down in line with changes in currency exchange rates. This could be good for the fund or bad, particularly if exchange rates are volatile.

---

**Annuity target risk** - this strategy is aimed at those who want greater certainty about the size of annuity (guaranteed income) they can buy at retirement. However, by moving into long gilts and cash, you may miss out on the higher returns you might have benefited from if you'd stayed in your growth fund.

---

**Post retirement risk (Annuity target)** - if you don't buy an annuity on your retirement date, you'll remain invested 75% in long-dated bonds (government bonds only or a mix of government and corporate bonds) and 25% in cash until you tell us what you want to do. This mix isn't designed for long-term investing and returns may not keep pace with inflation, meaning the real value of your fund may fall.

---

**Risk of delay** - this fund is designed as an interim investment for the short to medium term. It's in your interest to take a decision about how you want to take your benefits as soon as you can. You may want to take professional financial advice.

---

**Third party risk** - in the event that the underlying investments which the fund invests in suspend trading, Aegon may defer trading and/or payment to investors. The value ultimately payable will depend on the amount Aegon receives or expects to receive from the underlying investments.

---

**Credit risk** - this fund invests in bonds or other types of debt. Bonds are essentially loans to companies, governments or local authorities so there's a risk that these companies or government bodies may default on the loan. Bonds are rated in terms of quality, usually from AAA down to B and below. AAA is the highest quality and therefore the least likely to default and B or lower the most likely to default. Where we have it we show the credit quality of the loans held by this fund.

---

**Inflation risk** - this fund invests in lower risk investments, which means it shouldn't fluctuate in value greatly and is less likely to fall in value significantly. The downside to this is that returns are likely to be lower and there's a greater risk that they may not keep pace with inflation. It's therefore more suitable for short-term investment where you may need your money quickly.

---

**Interest rate risk** - interest rate changes could affect the value of bond investments. Where long term interest rates rise, the value of bonds is likely to fall, and vice versa.

---
