Why consider the Invesco US Enhanced Index Fund (UK)?

- The Invesco Quantitative Strategies team is one of the pioneers in factor-based enhanced index investing, leveraging a wealth of experience of more than 30 years.
- Quantitative screening of more than 3,000 global stocks and sophisticated portfolio construction have the potential to result in optimised portfolios built in a highly disciplined and repeatable way.
- The team focuses on minimising transactions costs through the application of sophisticated trading techniques.
- Rigorous risk management helps to maintain the Benchmark risk characteristics, generating an investing experience close to that of the Benchmark.

Benchmark

Please see overleaf for information on the benchmark of the fund.

Fund investment objective and policy

The objective of the Fund is to achieve capital growth and outperform the S&P 500 Index net of fees (the Target Benchmark) over a rolling 5 year period. The Fund invests at least 80% of its assets in shares of companies incorporated, domiciled or carrying out the main part of their economic activity in the US. There is no guarantee that the Fund will achieve its target and an investor may not get back the full amount invested. The Fund may use derivatives (complex instruments) to manage the Fund more efficiently, with the aim of reducing risk, reducing costs and/or generating additional capital or income.

Fund strategy

The performance of the fund is generated through a systematic factor based investment process driven by four concepts: Earnings momentum, Price momentum, Quality and Value. Relative risk is controlled with the help of an optimiser, an analysis tool that recommends trades to maximise portfolio exposure to the selected stocks within pre-determined risk/return parameters. In terms of portfolio construction, we tightly constrain the risk taken at sector and industry level. Our diversified approach to stock selection favours companies that, in our view, are attractively valued and have good earnings and price momentum and evidence that management supports shareholder value.

Investment risks

- The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested.
- The fund may use derivatives (complex instruments) in an attempt to reduce the overall risk of its investments, reduce the costs of investing and/or generate additional capital or income, although this may not be achieved. The use of such complex instruments may result in greater fluctuations of the value of the fund. The Manager, however, will ensure that the use of derivatives within the fund does not materially alter the overall risk profile of the fund.
- As a result of COVID-19, markets have seen a noticeable increase in volatility as well as, in some cases, lower liquidity levels; this may continue and may increase these risks in the future.

Benchmark

- Benchmark: S&P 500 Index GBP (Net Total Return)
- This is a Target Benchmark. The Fund aims to outperform the Benchmark net of fees over a full market cycle. The Fund has a high correlation to the Benchmark and has similar risk characteristics aiming for a tracking error target of 1%. As a result, this will limit the extent to which the Fund's performance will deviate from the Benchmark. The Fund's performance can be compared against the Benchmark.
