

T. ROWE PRICE FUNDS OEIC

Dynamic Global Bond Fund — Class C Acc

As at 29 February 2024

Figures shown in GBP

PORTFOLIO MANAGEMENT TEAM:

Quentin Fitzsimmons

Managed Fund Since: 2023, Joined Firm: 2015

Scott Solomon

Managed Fund Since: 2023, Joined Firm: 2005

INVESTMENT OBJECTIVE

To deliver positive returns (after the deduction of costs and charges), comprising of income and growth, over rolling 3-year periods. A positive return is not guaranteed over this or any time period and a capital loss may occur. For full investment objective and policy details refer to the prospectus.

Quentin Fitzsimmons is A rated by Citywire.

FUND OVERVIEW

Inception Date of Fund	12 Dec 2016
Inception Date - Class C Acc	12 Dec 2016
Base Currency of Fund	GBP
Share Class Currency	GBP
Categories of Shares	Accumulating
Total Fund Assets	£72.2 million
Number of Issues	195
Percent in Cash	18.9%
Ongoing Charges - based on financial year ending 29 Feb 2024	0.54%
Maximum Initial Charge	—
Minimum Investment	£10,000
Morningstar Category™	EAA Fund Global Flexible Bond
IA Sector	IA Sector - Targeted Absolute Return
Class C Acc - ISIN Code	GB00BD0NLR34
Class C Acc - Bloomberg Code	TRPDGCA:LN

HISTORICAL PERFORMANCE

CUMULATIVE PERFORMANCE

(NAV, total return)	Inception Date	One Month	Three Months	Year-to-Date	One Year	Three Years	Five Years	Since Inception
Class C Acc	12 Dec 2016	0.63%	0.96%	0.99%	-3.42%	-1.65%	8.75%	3.17%
Linked Performance Benchmark		0.41%	1.29%	0.88%	5.13%	7.92%	8.96%	10.32%

ANNUAL PERFORMANCE

(NAV, total return)	28 Feb 2019 to 29 Feb 2020	29 Feb 2020 to 28 Feb 2021	28 Feb 2021 to 28 Feb 2022	28 Feb 2022 to 28 Feb 2023	28 Feb 2023 to 28 Feb 2024
Class C Acc	-1.10%	11.80%	-0.10%	1.95%	-3.42%
Linked Performance Benchmark	0.79%	0.18%	0.19%	2.47%	5.13%

Past performance is not a reliable indicator of future performance.

Source for performance: T. Rowe Price. Fund performance is calculated using the official NAV with distributions reinvested, if any. Sales charges, taxes and other locally applied costs have not been deducted and if applicable, they will reduce the performance figures.

Benchmark: Investors may use the benchmark to compare the fund's performance. The benchmark has been selected because it is similar to the investment universe used by the investment manager and therefore acts as an appropriate comparator. The investment manager is not constrained by any country, sector and/or individual security weightings relative to the benchmark and has complete freedom to invest in securities that do not form part of the benchmark.

Index returns are shown with gross income reinvested.

Effective 1 August 2021, the fund changed its primary comparator benchmark from the 3-month GBP LIBOR to the 3-month GBP SONIA in anticipation of the transition away from use of LIBOR settings. Historical benchmark representations have not been restated.

KEY FUND RISKS

ABS and MBS - Asset-Backed Securities (ABS) and Mortgage-Backed Securities (MBS) may be subject to greater liquidity, credit, default and interest rate risk compared to other bonds. They are often exposed to extension and prepayment risk. **China Interbank Bond Market** - The China Interbank Bond Market may subject the fund to additional liquidity, volatility, regulatory, settlement procedure and counterparty risks. The fund may incur significant trading and realisation costs. **Country (China)** - Chinese investments may be subject to higher levels of risks such as liquidity, currency, regulatory and legal risks due to the structure of the local market. **Country (Russia and Ukraine)** - Russian and Ukrainian investments may be subject to higher risks associated with custody and counterparties, liquidity, market disruptions, as well as strong or sudden political risks. **Credit** - Credit risk arises when an issuer's financial health deteriorates and/or it fails to fulfill its financial obligations to the fund. **Currency** - Currency exchange rate movements could reduce investment gains or increase investment losses. **Default** - Default risk may occur if the issuers of certain bonds become unable or unwilling to make payments on their bonds. **Derivatives** - derivatives may result in losses that are significantly greater than the cost of the derivative. **Emerging markets** - Emerging markets are less established than developed markets and therefore involve higher risks. **High yield bond** - High yield debt securities are generally subject to greater risk of issuer debt restructuring or default, higher liquidity risk and greater sensitivity to market conditions. **Interest rate** - Interest rate risk is the potential for losses in fixed-income investments as a result of unexpected changes in interest rates. **Issuer concentration** - Issuer concentration risk may result in performance being more strongly affected by any business, industry, economic, financial or market conditions affecting those issuers in which the fund's assets are concentrated. **Liquidity** - Liquidity risk may result in securities becoming hard to value or trade within a desired timeframe at a fair price. **Prepayment and extension** - Mortgage- and asset-backed securities could increase the fund's sensitivity to unexpected changes in interest rates. **Sector concentration** - Sector concentration risk may result in performance being more strongly affected by any business, industry, economic, financial or market conditions affecting a particular sector in which the fund's assets are concentrated.

TOP 10 ISSUES

Issuer	Maturity	Coupon (%)	% of Fund
United Kingdom Inflation-Linked Gilt	22 Mar 24	0.125	13.3

Not Rated	-0.3
Reserves	18.9

Credit ratings for the securities held in the fund are provided by Moody's, Standard & Poor's and Fitch and are converted to the Standard & Poor's nomenclature. When a rating is available from all three agencies, the median rating is used. If there are two ratings, the lower rating is used and if only one rating is available, that rating is used. If a rating is not available, the security is classified as Not Rated (NR). The rating of the underlying investment vehicle is used to determine the creditworthiness of credit default swaps and sovereign securities. The fund is not rated by any agency.

GENERAL FUND RISKS

General fund risks - to be read in conjunction with the fund specific risks above. **Counterparty** - Counterparty risk may materialise if an entity with which the fund does business becomes unwilling or unable to meet its obligations to the fund. **Geographic concentration** - Geographic concentration risk may result in performance being more strongly affected by any social, political, economic, environmental or market conditions affecting those countries or regions in which the Fund's assets are concentrated. **Hedging** - Hedging measures involve costs and may work imperfectly, may not be feasible at times, or may fail completely. **Investment fund** - Investing in funds involves certain risks an investor would not face if investing in markets directly. **Management** - Management risk may result in potential conflicts of interest relating to the obligations of the investment manager. **Market** - Market risk may subject the fund to experience losses caused by unexpected changes in a wide variety of factors. **Operational** - Operational risk may cause losses as a result of incidents caused by people, systems, and/or processes.

IMPORTANT INFORMATION

This factsheet is for marketing purposes only.

The Funds are sub-funds of the T. Rowe Price Funds OEIC, an investment company with variable capital incorporated in England and Wales which is registered with the UK Financial Conduct Authority and which qualifies as an undertaking for collective investment in transferable securities ("UCITS"). Full details of the objectives, investment policies and risks are located in the prospectus which is available with the key investor information documents in English, together with the annual and semi-annual reports (together "Fund Documents"). Any decision to invest should be made on the basis of the Fund Documents which are available free of charge from the local representative, local information/paying agent or from authorised distributors and via www.troweprice.com. The latest fund prices are available online from Morningstar.

Fund Assets, holdings-based analytics (excluding portfolio turnover), and portfolio attribution are calculated using T. Rowe Price's internal Investment Book of Records (IBOR). Due to timing and accounting methodology differences, IBOR data may differ from the Accounting Book of Records (ABOR) data provided by the Fund's accountant.

GLOSSARY

Accumulating shares – A class of common stock given to shareholders of a company instead of, or in addition to, a dividend. They are usually given to gain a tax advantage.

Asset Backed Security (ABS) – A security whose income payments and capital value are derived from and secured against a specified pool of underlying assets.

Comparator Benchmark – A stock market index that can be used to analyze the allocation, risk and return of a fund, also known in the industry as a performance benchmark.

Custom Benchmark – Any benchmark customised to meet a client's investment goals.

Controversial weapons – What constitutes a controversial weapon varies by region, country and institution. However, some categories are included in international conventions such as the Mine Ban Treaty and the Convention on Cluster Munitions. The categories currently covered include antipersonnel mines, biological weapons, chemical weapons, cluster munitions, depleted uranium ammunition and armor, incendiary weapons, nuclear weapons and white phosphorus weapons.

Coupon – A document that shows proof of legal ownership of a share certificate or a bearer bond certificate and is presented to claim the owner's entitlement to dividends or interest paid out on a security.

Credit Quality – A measure of a bond issuer's ability to repay its debt interest and principal in a timely manner, and as such is an indicator of credit risk. Credit rating agencies issue credit quality ratings that indicate the riskiness of firms in the credit market.

Derivatives – A contract whose value is most commonly based on the price movement of an underlying financial asset, such as a bond, stock, commodity, currency, interest rate or market index. Derivatives can be used to speculate on a movement in the underlying assets, hedge a position, or give leverage to a holding. The most common types are futures, forwards, swaps and options.

Diversification – A risk management strategy that mixes a variety of investments in a portfolio. A diversified fund holds different asset types and investment instruments in order to limit exposure to any single asset or risk.

Distributing shares – This type of stock entitles the shareholder to a dividend agreed at the company's annual general meeting.

Environmental Sustainability Characteristics – Features of a product, company activity or regulations that indicate a responsibility to conserve natural resources and protect global ecosystems for current and future generations.

ESG – The acronym for environmental, social and governance. ESG standards are applied to a company's operations so that socially conscious investors can screen potential investments. A company's performance as a steward of nature is assessed under E; a company's treatment of employees, suppliers, customers and the community it operates in are assessed under S; and G covers a company's leadership, executive pay, audits, internal controls and shareholder rights.

Exclusion List – A list of companies, industries or countries that are excluded from a fund based on ESG factors or risks. Screens based on ESG criteria can be applied to portfolios as a standalone approach, or in combination with other styles, such as thematic investing or integrating ESG into the investment process.

Hedging – An investment technique whereby an investor or trader takes on a new risk that offsets an existing one, such as a possible adverse change in an exchange rate, interest rate, stock, bond or commodity price.

Impact Investing – An investment strategy that aims to produce a financial return while also creating a positive social or environmental impact.

Maturity – The agreed date on which the life of a transaction, financial instrument or investment ends. Maturity is often used in conjunction with deposits, foreign exchange trades, forward transactions, interest rate and commodity swaps, options, loans and fixed instruments.

Maximum Initial Charges – The maximum level of permitted sales charges paid to an intermediary when an investment is made in a fund. The charges cover administration, marketing and other costs.

Mortgage-Backed Security (MBS) – A type of asset backed security that is secured against a mortgage or collection of mortgages.

Morningstar Category – A classification of a fund based on its investment style as measured by underlying holdings in the portfolio over three years. If the fund is new and has no portfolio, Morningstar will estimate where it will fall before assigning a more permanent category.

NAV (net asset value per share) – The closing market value of the securities owned in the portfolio plus all other assets such as cash, minus liabilities, divided by the total number of shares outstanding.

Ongoing Charges – The ongoing charges is a figure published annually by an investment company, covering the annual cost of investing in a fund. They include payments for investment management, administration, custody of assets and the costs of independent oversight functions.

Spread Duration – This measures the sensitivity of the price of a security to changes in its credit spread. The spread is the difference between the yield of a security and the yield of a benchmark rate, such as a cash interest rate or government bond yield.

Sustainability Indicators – They are summary measures used in monitoring and reporting on environmental and social conditions, helping with the assessment of progress towards sustainability.

Total Return – The return on an investment of a specified period, including price appreciation or depreciation plus any reinvested income, expressed as an average annual compound rate of return.

Cumulative Return: The actual return of an investment for a specified period. A cumulative return does not indicate how much the value of the investment may have fluctuated during the period. For example, a fund could have a 10-year positive cumulative return despite experiencing some negative years during that time.

Average Annual: This is always hypothetical and should not be confused with actual year-by-year results. It smoothes out the variations in annual performance to tell you what constant year-by-year return would have produced the investment's actual cumulative return. This gives one an idea of an investment's annual contribution to your portfolio, provided you held it for the entire period.

Volatility – This measures swings in the price of an asset. The more volatile the price, the riskier the security.

Yield to Maturity – Yield to maturity (YTM) is the total return anticipated on a bond held to maturity. YTM is considered a long-term bond yield but is expressed as an annual rate.

Yield to Worst – Yield to worst (YTW) is a measure of the lowest possible yield on a bond whose contract includes provisions that would allow the issuer to close it out before it matures. YTW helps investors manage risks and ensure that specific income requirements will still be met even in the worst scenarios.
