

Objective

The objective of the fund is to seek a combination of capital growth and income. This will be achieved whilst aiming to maintain the fund's risk rating classification as set by an independent asset allocator.

The fund has a risk rating classification of '5'.

The Sub-fund will be actively managed on a low to medium risk strategy and assets may be allocated to any geographical sector through gaining exposure to a range of asset classes by investing at least 70% in collective investment schemes. The asset class exposure is likely to have a mix of lower- and medium-risk investments such as cash, bonds and property, and higher-risk investments such as shares in companies.

Risk Profile

Avellemy have selected Dynamic Planner to provide a set of long term strategic asset allocations. By providing diversification across a range of differing asset classes, these allocations are designed to provide the most efficient expected long term returns for a given degree of risk, based on Dynamic Planner's independent modelling assumptions.

The portfolio is managed to remain in line with Dynamic Planner Risk Profile 5 - 'Low Medium' (where Risk Profile 1 is 'Lowest', and 10 is 'Highest').

Key Facts

Launch date	April 2019
Fund Size	£547.54m

It does not include any other charges, such as Platform or Adviser Charges. Deduction of these fees will impact on the performance shown. Performance data provided by IFSL/Factset. MSCI Dynamic Planner benchmark data provided by Financial Express Ltd (FE) / MSCI on a monthly basis.

Past performance is not a guide to future performance and may not be repeated. Investment involves risk.

Risk / Return Summary X-Y Chart

The Risk / Return chart shows the return of the fund and benchmark - plotted on the vertical or Y axis - in relation to the level of risk incurred (volatility) on the horizontal X axis. Generally, the higher the return of an investment, the higher the expected risk. Therefore, an investment positioned higher and further to the left would have achieved an ideal outcome - higher returns with lower risk.

Return and volatility data calculated on a monthly basis since inception/end of offer period (May 2019)

Glossary

Annualised - The data (e.g. returns, volatility) for a period recalculated to provide an average for one year.

Volatility - Volatility shows the amount of variation within a set of values - in this case the range of monthly returns, and therefore provides an indication of how much an invested value would have moved up and down over the period. Volatility is therefore commonly used as a measure of investment risk, as the more volatile an investment, the more likely it is to fall in value over the shorter term.

Total	100.00%

Developed ex UK Equity - Global (ex UK) markets where the institutional stability/openness to foreign investment/efficiency of market operations is very high. These markets will typically have a high level of regulation and oversight, and higher levels of liquidity.

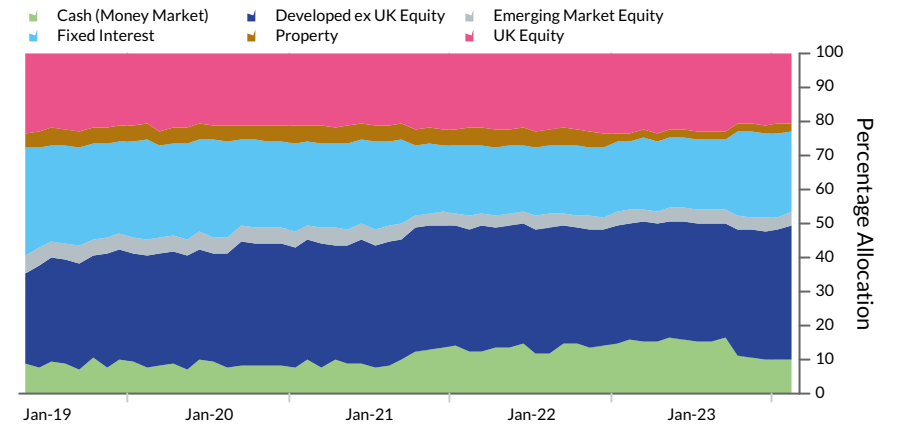

Asset Breakdown

Geographical Asset Breakdown

Historical Asset Allocation

The **Historical Asset Allocation** chart shows how the allocation of the fund to the main asset classes has changed over time. Sharp inclines will indicate large changes - calm stripes will show an asset allocation being maintained.

Emerging Markets - Global markets with modest institutional stability, openness to foreign ownership is significant but lower than developed markets, and efficiency of market operations is generally good. Liquidity tends to be lower than developed markets.

Important information

All data provided by Avellemy Ltd, unless otherwise stated, as at 29/02/2024.
