About fund performance

Investors should always consider performance in relation to the objective of the fund and over periods of at least five years. If a fund has risen in value, it doesn't mean it is meeting its objective – especially if the fund is aiming to outperform a particular benchmark or meet a risk target. The same applies if the fund has fallen in value.

Our risk rating

Below average risk funds will generally see some change in day-to-day value, both up and down, and these changes will typically be larger than those of a cash deposit. They may hold a broad range of investment types, including equities (shares), but a significant proportion may also be invested in investments that aim to provide a reliable source of income (like government and corporate bonds) and, with that, greater stability than would typically be available from equities. They try to provide better long-term growth prospects than a cash deposit, but are lower risk than funds investing largely in equities.

Fund objective

The fund aims to achieve capital growth (after charges) over rolling five-year periods whilst managing risk. It is designed for investors who have a below average tolerance for risk and value a balance between preserving capital and achieving some capital growth over the long-term. It does this by regularly reviewing its mix of investments and making adjustments to keep the fund within its risk level. Although risk is actively managed, it doesn't mean there's no risk and the fund could still experience falls in value. The fund invests in a balanced portfolio of fixed interest securities (between 9%-65%) including corporate and government bonds, between 35%-65% in equities (company shares) and between 0%-26% in money market funds. It will gain access to this mix through various index tracker funds, except for the cash investments.

Fund performance

The following graph and tables show the performance of the fund over various time periods compared to the fund's benchmark (if there is one). All performance information is as at 31 Dec 2023 unless otherwise stated.

In the graph, performance is shown since launch if the fund is less than five years old.

Fund manager information

This fund is an Aegon Solution. This means it is a pre-built fund Aegon have created to offer whole investment strategies in a single fund with the aim of making investing easier. We reserve the right to add, remove and replace the underlying funds within this solution with the aim of making sure the fund continues to meet its aims and objectives. Sometimes we work with external fund managers and they select and manage the underlying funds on our behalf. The additional charges/expenses may change when underlying funds are replaced, added or removed from the portfolio or when weightings between the underlying funds are changed. Please note, there's no guarantee the fund will meet its objective.

Risks specific to this fund

There is no guarantee the fund will meet its objective. The value of an investment can fall as well as rise and investors could get back less than they originally invested. All funds carry a level of risk and the information below outlines the key risks for this fund.

Currency risk - this fund invests overseas so its value will go up and down in line with changes in currency exchange rates. This could be good for the fund or bad, particularly if exchange rates are volatile.

Credit risk - this fund invests in bonds or other types of debt. Bonds are essentially loans to companies, governments or local authorities so there's a risk that these companies or government bodies may default on the loan. Bonds are rated in terms of quality, usually from AAA down to B and below. AAA is the highest quality and therefore the least likely to default and B or lower the most likely to default. Where we have it we show the credit quality of the loans held by this fund.

Interest rate risk - interest rate changes could affect the value of bond investments. Where long term interest rates rise, the value of bonds is likely to fall, and vice versa.

Securities lending risk - this fund can hold other funds that earn a fee from lending assets. Securities lending is a process used to generate additional returns for investors by lending to eligible financial institutions some of the shares and bonds a fund holds. To protect against failure to repay borrowed assets, the borrower must provide collateral to cover the loan. The borrower pays the lending fund a fee for borrowing the shares or bonds. At the end of the loan, the borrower pays the shares or bonds back in full. There is a risk that the borrower may fail to pay back the shares or bonds. To minimise this risk, the lending fund conducts securities lending only with select financially stable institutions, and it also holds insurance to cover any losses in the unlikely event that the loan isn't paid back.
