Fund Objective & Policy

The Fund aims to provide income with potential for long term capital growth. It looks to outperform a composite index over rolling 3-year periods, after the deduction of charges. This composite index comprises:

- 56% Bloomberg Global Aggregate ex GBP (GBP Hedged) Index,
- 24% Bloomberg Sterling Aggregate Index,
- 10% MSCI ACWI ex UK Index,
- 5% FTSE All-Share Index,
- 5% Sterling Overnight Index Average (SONIA)

The Fund is actively managed, and invests at least 80% of its assets in other funds.

The Fund usually invests in other Columbia Threadneedle funds, however, funds managed by companies outside the Columbia Threadneedle group may also be held, when this is considered appropriate. These funds may invest worldwide.

The Fund focuses on investment in funds providing exposure to bonds (including corporate and government bonds), and to a lesser extent, funds investing in equities (company shares).

The balance of the exposure between these different asset types may vary over time, however, equity exposure will usually not exceed 20% of the Fund's value, under normal market conditions.

The Fund may also hold money market instruments, deposits, cash, and near cash.

Derivatives may be used with the aim of reducing risk or managing the Fund more efficiently, and up to 20% of the value of the Fund may be invested in funds that use derivatives for investment purposes. Derivatives are sophisticated investment instruments linked to the rise and fall of the price of other assets.

The composite index is representative of the Fund's investment exposure, and provides a suitably weighted target benchmark of global investment grade bonds (hedged to sterling), investment grade sterling-denominated bonds, global equities (excluding the UK), UK equities, and cash, against which Fund performance can be evaluated over time.

Risk & Reward Profile

UCITS SRRI

The Risk and Reward Indicator demonstrates where the Fund ranks in terms of its potential risk and reward. Please see the Key Investor Information Document for more information.

Key Risks

- The value of investments can fall as well as rise and investors might not get back the sum originally invested.
- As this Fund invests into other Funds you should consider the underlying investments and overall risks.
- Where investments are in assets that are denominated in multiple currencies, or currencies other than your own, changes in exchange rates may affect the value of the investments.
- The Fund invests in securities whose value would be significantly affected if the issuer refused, was unable to or was perceived to be unable to pay.
- Changes in interest rates are likely to affect the Fund's value. In general, as interest rates rise, the price of a fixed rate bond will fall, and vice versa.
- The Fund may invest in derivatives (complex instruments linked to the rise and fall of the value of other assets) with the aim of reducing risk or minimising the cost of transactions. Such derivative transactions may benefit or negatively affect the performance of the Fund. The Manager does not intend that such use of derivatives will affect the overall risk profile of the Fund.
- The fund may exhibit significant price volatility.
- The risks currently identified as applying to the Fund are set out in the "Risk Factors" section of the prospectus.

Typical Investor Profile

The Fund may be suitable for investors with an investment horizon of more than five years seeking a total return who are prepared to tolerate moderate price fluctuations.

If investors are uncertain if the Fund is suitable for them, they are advised to contact a financial adviser.

Share classes in the table may not be open to all investors, please refer to the Prospectus for further information. Overall impact of costs: Costs and expected returns may increase or decrease as a result of currency and exchange rate fluctuations, if costs are to be paid in another currency than your local currency. The ongoing charges figure (OCF), exit charges (maximum amount to be deducted shown in the table above) and transaction costs show the percentage that may be deducted from your expected returns. The OCF is usually based on the last year's expenses, includes charges such as the Fund's annual management charge and operating costs. Transaction costs displayed are based on a three year average total and are calculated based on FYE Report and Account figures. Where the fund is less than 3 years old the transaction costs are based on proxy and actual costs. All transaction costs are as at 25/05/23. Additional distributor or intermediary fees may not be included. In some cases, the OCF may be based on an estimate of future charges. For a more detailed breakdown please visit www.columbiathreadneedle.com/fees.
